    void deposit(double amount) {
        totalBalance += amount;

        cout << "Transaction History:\n";
        cout << "-----\n";
        cout << "Deposit      + $" << amount << "\n";

        //writes each deposit to transaction.txt
        saveTransaction("Deposit", amount);
    }

    //displays the current balance you have now
    void currentBalance() {
        cout << "Current Balance:$"<< totalBalance << "\n\n";
    }

    // method to save each transaction to a file
    void saveTransaction (string item, double amount) {
        ofstream file ("transactions.txt", ios::app);
        if (file.is_open()){
            file << item << ":$" << amount << endl;
            file.close();
        }
    }
};

int main() {

    //Created variable called userAccount
    BankAccount userAccount;

    //prints the name of the user account

```

```

cout << "User's account \n" << endl;

//calls currentBalance function
userAccount.currentBalance();

//calls deposit function
userAccount.deposit(800.00);

//calls payment function
userAccount.payment("flix", 7.99);
userAccount.payment("Dropbox", 12.50);
userAccount.payment("Shopify", 12.50);
userAccount.payment("Uber", 4.56);

//calls finalBalance function
userAccount.finalBalance();

return 0;

```

Output:

```

User's account

Current Balance:$753414

Transaction History:
-----
Deposit      + $800
flix         - $7.99
Dropbox      - $12.5
Shopify      - $12.5
Uber         - $4.56

Final Balance:$754176

```
